COMPANY PRIORITIES

PERFORMANCE QUALITY:

Streams management believes that the shortest path to success that will ensure business continuity and growth is to provide the highest level of service to overcome existing competition and gain customer confidence. The company's management has entrusted itself with accepting any project only after making sure that it can be submitted and delivered in the required and expected form, which ensures the satisfaction of the customers and their loyalty to the company.

BUSINESS ETHICS:

Streams puts ethics at its highest priorities, as work ethic refers to the values of behavior and ethics that illustrate the right and wrong behaviors which appear in the work environment. Poor ethical standards lead to problems with regard to the image of the establishment to the public and to its clients. Therefore, ethical decision-making reinforces confidence with the public and is a key element in the relationship of the establishment with the public, employees and other companies.

CREDIBILITY AND CUSTOMER SATISFACTION:

Streams is increasingly interested in retaining existing customers while targeting non-customers and continually measuring customer satisfaction as an indicator of how well the company delivers products and services to the market. The company continues to pay attention to the high standard of customer service which in turn should lead to higher levels of customer satisfaction and thus affect customer retention and customer loyalty.

Kodak alaris

Kodak Alaris is a manufacturer and marketer of traditional photographic supplies, hardware and software for digital imaging and information management, and retail printing kiosks.

Wacom is the world leader in manufacturing and innovation of electronic tablets used in digital and e-signature applications. Besides developing customized mobile and desktop solutions, Streams has developed a series of standard products to use and market as follows:

1- DDMS Digital Document Management System

Streams developed its own management and control system that delivers the highest level of quality accomplishment of the digitalization process automation.

2 - Streams Data Entry Platform

Data Entry is one of the main stages forming the digital transformation process as its output is the fields to be searched to retrieve the documents requested. Streams Innovation team created a new Data Entry Platform witha seamless integration with the DDMS system which controls the full digital transformation operation.

3 - Streams Signature Insertion and Verification Application

Streams Sign Insert is an application to capture the handwritten signature electronically and add it to a PDF document on Desktop or network environments. By using Sign Insert, you can sign the document electronically without the need to print and sign on paper. After the document has been signed a new PDF will be created for further usage (storage, email, …)

4 - Streams Order Tracking and Processing System

Streams OTS is a customizable system developed to track the process of tacking sales orders in various remote ways through a mobile app that integrates with a back office system that could be integrated with customers main systems or work standalone.

5 - Streams KYC Application for Banks

Streams developed a KYC (Know Your Customer) application that cuts down the time of banks customers and integrate with the banks database to update the customers data and get a biometric signature .
